A Lifetime of Music

**MEMO: To All Bryston Customers**

**SUBJECT: Bryston BryFi Mini A Wireless Speaker System**

December, 2017

Hi Folks,

Over the past few months we have been working on an expanded Bryston line of BryFi Wireless products.

The first system would consist of a pair of Bryston Mini A speakers with the amplifiers built in and a small wireless transmitter (see picture) that contains the BryFi computer, WiFi receiver, an optical input, a line level input and a High Res DAC.

The entire system would be managed from the BryFi interface currently available on our BryFi BW-1 portable system and controlled with your IPAD etc.

The optical input would typically be used for your TV's optical output so selecting TV on the BryFi interface would send the audio from your TV wirelessly to the Mini A speaker system. The Analog input could be for any other piece of equipment you may want to plug in, like the pre-amp box from your turntable.

We are thinking going forward that all our Bryston Model A floor-standing speakers would have good potential for this type of wireless product.
